BENEFITS OF E-PAYMENTS

WORKED DONE BY: POLLICORO SIMONE PIO, MAGGI ANGELO, PULPITO GIUSEPPE,SFORZA GABRIELE

WHAT ARE E-PAYMENTS?

INTRODUCTION

E-payments offer many advantages in a cashless society. They are fast and convenient, allowing people to pay for goods and services with just a phone or card.

This saves time and reduces the need to carry physical money. E-payments are also more secure because digital transactions can be tracked, helping to prevent theft and fraud. In addition, they make it easier for businesses to keep records and manage their finances. Overall, e-payments help create a safer, more efficient, and modern way of handling money.

TRANSACTION SPEED

INTRODUCTION:

Digital payments, including mobile apps, contactless payments, and QR codes, are faster and more convenient than traditional methods, offering a simple and immediate payment experience.

Mobile Payments:

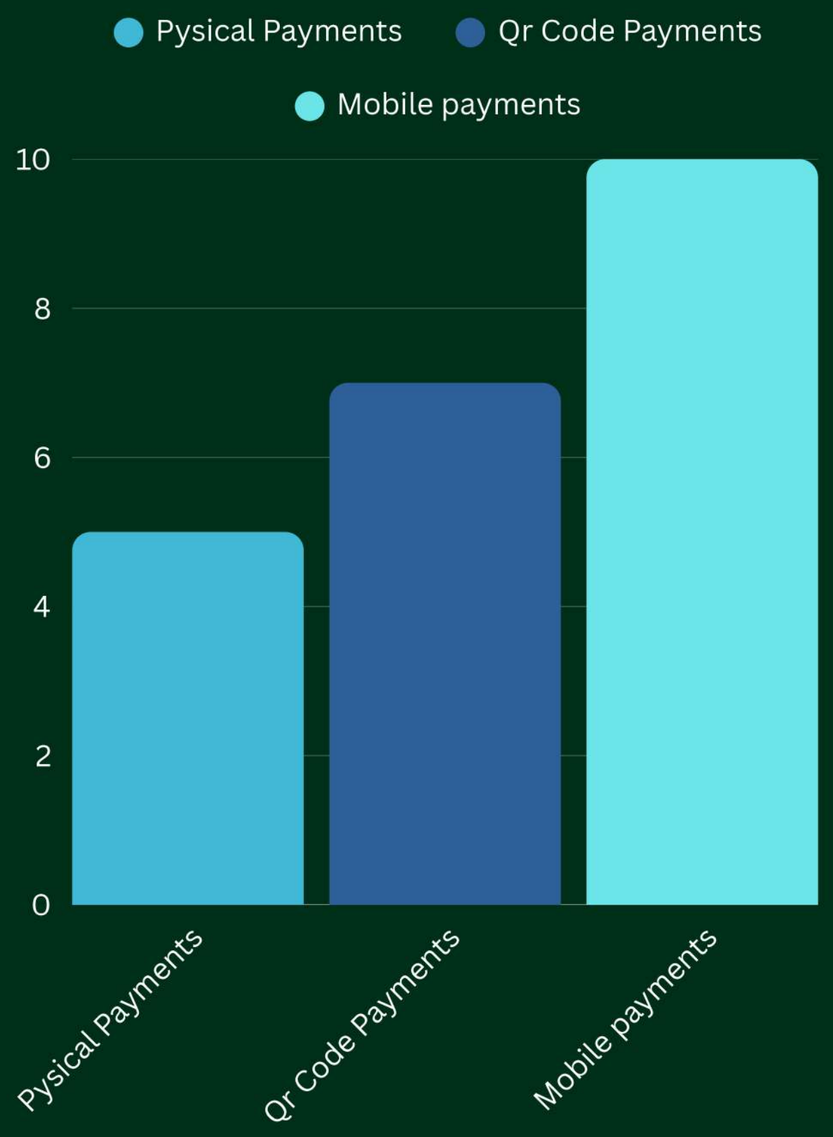
With mobile payment apps like Apple Pay, Google Pay, and Samsung Pay, the average transaction time is about 2-3 seconds.

Qr Code Payments:

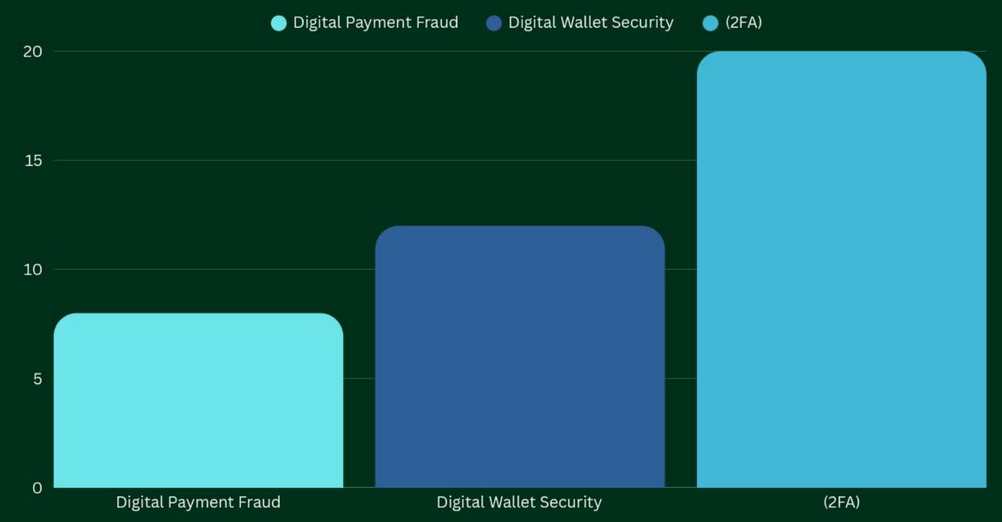
They are generally 30–40% faster than cash payments (which take 5–10 seconds to count and give change).

Physical Payments:

With mobile payment apps like Apple Pay, Google Pay, and Samsung Pay, the average transaction time is about 2-3 seconds.



Digital Payment Security



INTRODUCTION:

The security of digital payments is crucial, as the increase in online and mobile transactions brings greater risks of fraud and cyber attacks, requiring advanced protection systems and constant checks.

GLOBAL DIGITAL PAYMENTS FRAUD:

According to ACI Worldwide's “2023 Global Payments Fraud and Security” report, digital payment fraud increased by 15% compared to the previous year, and global losses could exceed $30 billion by 2026.

EFFECTIVENESS OF 2FA:

Using 2FA reduces the risk of unauthorized access to an account by 96%, according to a Google study.

DIGITAL WALLET SECURITY:

Transactions made through digital wallets (such as Apple Pay, Google Pay, and Samsung Pay) are considered more secure than traditional card transactions thanks to the use of tokenization and encryption.
